“The best produced and most informational video I have seen on raising Emus and Rheas.”

ROGER HALEY, RATITE RANCHER

Emus are the second largest living bird. Indigenous to Australia, they are now raised throughout the United States and Canada for their healthy red meat, pliable hide, and deep-penetrating oil.

Rheas, sometimes called the South American Ostrich, are also raised throughout North America for their meat, hide and oil.

“The hatching and sexing sections are spectacular. The procedures presented and the attention to details make this video one that needs to be seen over and over.”

David Harshbarger,
Ratite Investor

Exceptional coverage of facilities, procedures, egg collection, incubation, candling, hatching, brooding, handling of chicks and breeders, sanitation, sexing, microchipping and much, much more.

Featuring on-camera hatching of an emu and rhea; opening eggs on late and malpositioned chicks; vivid, up-close sexing.
